

## Create a 3D cube drawing:

1. Look around the gallery - find an interesting detail to draw into the large square.
2. Use pencils, crayons or felt pens to colour in your design.

3. Fold along the GREY lines and cut along the BLACK lines to create your 3D cube drawing.
4. As you fold the paper you can change the order of the overlapping flaps. How many different designs can you create? Which arrangement looks the best?

5. If you like you can glue your cube together and take it home, or exhibit it in the gallery.
